

$$S \rightarrow aS \mid aSbS \mid \epsilon$$

A a. two parse trees for aab:

b. two leftmost derivations:

$$\begin{aligned} S \rightarrow aS \rightarrow aaSbS \rightarrow aaeBS &\rightarrow aabe \\ &\text{ie } aabs \quad \text{ie } aab \end{aligned}$$

$$\begin{aligned} S \rightarrow aSbS \rightarrow aaSbS \rightarrow aaeBS &\rightarrow aabe \\ &\text{ie } aabs \quad \text{ie } aab \end{aligned}$$

c. two rightmost derivations:

$$\begin{aligned} S \rightarrow aS \rightarrow aaSbS \rightarrow aaSbe &\rightarrow aaeB \\ &\text{ie } aaSb \quad \text{ie } aab \end{aligned}$$

$$\begin{aligned} S \rightarrow aSbS \rightarrow aSbe &\rightarrow aaSb \rightarrow aaeB \\ &\text{ie } aSb \quad \text{ie } aab \end{aligned}$$

Leftmost derivations rewrite the leftmost nonterminal first
 Rightmost derivations rewrite the rightmost nonterminal first
